Parker-Hale African Magnum 1100M Series

The Parker-Hale African Magnum has been developed in conjunction with professional hunters and game wardens throughout Africa and built for a rugged lifetime of use. Amongst the many features of this great Parker-Hale Sporter in .375 Magnum and .458 Magnum are a single stage adjustable trigger; hand adjusted feed and fully bedded stock; fixed shallow V backsight with vertical white line; ramp mounted bead foresight with tubular protector; top quality 22" cold forged steel barrel; fully checkered; specially selected European Walnut Stock with Monte Carlo cheek-piece, snobble fore-end. Handsome white spacers add elegant finish to the double ventilated recoil pad and grip cap. Drilled and tapped, but not fitted with scope blocks (these are supplied at no extra charge with each rifle). A special feature of this weapon is the fine black satin non-reflective finish on metal parts. Other notable features of the Safari African Magnum are a specially secure hinged floorplate with release in the trigger guard; 180° flag type safety; back-swept bolt lever.

SPECIFICATION

Calibre: .375 Magnum, .458 Magnum. Barrel length: 22". Overall length: 44½". Magazine capacity: 3 shot. Sights: Standard fixed shallow V backsight and bead foresight. Receiver: Drilled and tapped for "Roll-Off" scope base blocks. Trigger: Adjustable single stage. Stock: Monte Carlo, Custom checkered. Drop at Comb: 1¾". Drop at Heel: 2¾". Drop at Monte Carlo: 2". Length of Pull: 14". Weight: 9¾ lbs.

Air Rifles

Airsporter

The loading is by the under lever principle with the barrel and cylinder permanently in line. A single stage trigger fully adjustable for weight.

Suggested Retail Price: **$129.95**

Mercury

Loading is by barrel breakdown and the patented barrel stop and spring-loaded plunger ensures positive shot to shot location after each loading.

Suggested Retail Price: **$ 99.95**

Meteor Super

Has all the features once exclusive to most expensive rifles. Same loading system as Mercury with single stage trigger adjustable between three and five pounds.

Suggested Retail Price: **$ 67.95**

Meteor

Produced for the man who wants to start off in a big way, the ideal first gun. The features are similar to the Meteor Super.

Suggested Retail Price: **$ 59.95**

BSA Air Rifles

For men who take fun shooting seriously a BSA air rifle looks right and feels right. You will notice immediately the fine balance of the gun, the smooth way it comes up to your shoulder and adjusts to your aim with the minimum of fuss. All models are dovetailed for scope mounting, scope not included in price of guns. Always be sure of your background max. range 350 yards.

22 Match Rifles

This superb new BSA match rifle is designed to meet in every detail the International Shooting Union's specification for the Standard Rifle.

Providing supreme consistent accuracy, it is superior in every way to other match rifles, in operation, looks and comfort.

It employs the time tested and proven Martini action which is assembled from only full machined components — no pressings of any type being used.

A new fore-end fixing has been incorporated using a 'V' section alloy strut, fixed directly to the barrel by screws at three points. The strut also provides infinite adjustment for the sling swivel which can be locked at any point in the 'T' slot. The slot is also fitted with a filler strip which can be adjusted to individual requirements.

Trigger System

The well tried trigger system is acknowledged to be supreme, with a variation of let-off between shot and shot, so small as to be indiscernible by the shooter.

Simple adjustments contained in the front of the trigger guard enable weight and backlash to be set to individual requirements within competition regulations, quickly and efficiently without removal of the action from the body.

Adjustment can be set so that there is no blacklash, no drag and no perceptible trigger movement.

The bottom of the trigger guard is flattened and grooved as a thumb rest for the standing position.

Stock

Only highly finished best selected French walnut is used for both fore-end and carefully designed butt. Spacers are fitted to allow length adjustment to suit each shooting position. A flat cheek piece preserves an identical sight line for the standing, kneeling or prone positions.

Accuracy

To ensure the very highest degree of accuracy BSA Martini International ISU rifles are shot from a machine rest before delivery. From five consecutive ten shot groups at 100 yards, each rifle is required to produce an average group size not exceeding ·75" cutting, no single group of the five to exceed 1" cutting. The accuracy diagrams actually fired are included with each rifle.

Sights

Parker Hale modified PHI tunnel foresight and PH25 rear-sight are standard fittings. The rearsight provides eight minute click adjustment and the eye piece incorporates a six hole attachment with aperture variations from ·080" to ·030".

SPECIFICATION

Barrel length	28"
Diameter	·850" – 0·002" Dia. Parallel Bore
Rifling Grooves	6
Twist	One turn in 16" Right Hand
Overall length	43" – 44"
Weight	10 3/4 lb.

Scorpion Pistol

The BSA Scorpion is super accurate. It had to be. We put into it our 60 years' experience of making high quality air rifles. Used specially developed manufacturing techniques. Gave it an extra long sight base. A rearsight adjustable for full windage and elevation. A specially contoured moulded grip. An automatic safety catch which locks on as you load. All to make sure it gives you a high level of consistent performance and years of pleasure. With safety.

Those vital components — the air cylinder and piston — are made from one-piece impact extrusions to eliminate welding or brazing and produce a high quality, close tolerance finish. The piston ring retainer carries two steel rings for consistent pressure build-up and incorporate the BSA shock absorbing buffer system for longer pistol life.

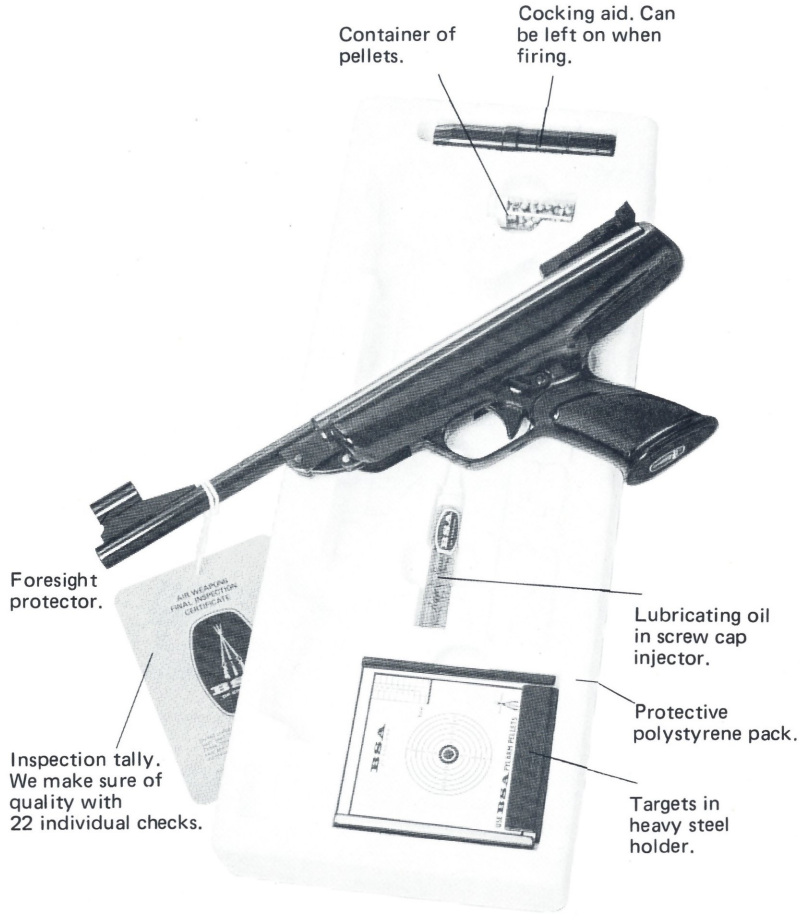
Precision bored from solid steel, the barrel is rifled by cold swaging. This ensures a fine, mirror finish and work hardens the surface for consistent performance.

Trigger mechanism parts are precision formed to very close tolerances on machines originally designed by the Swiss for the watch industry. The hammer release type system has an independent sear for light loading, consistent let-off and minimum wear. This refined system is used on the famous Martini-International .22 match rifle. The trigger weight is externally adjustable with key provided.

As we said — the Scorpion is something special. And it's British all through.

Always be sure of your background. Max. range 350 yds.

Suggested Retail Price: **$70.95**



Container of pellets.
Cocking aid. Can be left on when firing.
Foresight protector.
Lubricating oil in screw cap injector.
